

The DynaMo

The DynaMo from Vald Performance is a comprehensive tool combining advanced data collection, real-time analysis, and actionable insights to enhance performance analysis in various fields, including sports, corporate settings, and individual performance tracking.

At Innova Performance the DynaMo is used to assess the client, giving immediate feedback for our professionals to move forward with the best treatment plan. Metrics can be customised for a client's specific needs. This could include physical performance indicators like speed, endurance, and strength, or corporate metrics like productivity, efficiency, and engagement. The tool provides benchmarking capabilities, allowing us to compare their performance against industry standards, historical data, or peer groups.

At Innova our clients interact with DynaMo Dashboards that present data in an intuitive and visually appealing manner. This allows them to easily understand trends, anomalies, and key insights. Another DynaMo benefit is its ability to generate custom reports tailored to the clients specific needs. We can then share these reports with them and other professionals in the field.
